TITLE : POCKETBOOK-TYPE ELECTRONIC  
COMPUTER

ABSTRACT : PURPOSE: To attain excellent portability and operability and increase the number of degrees of freedom for improvement of system, by connecting card-type computer constituting elements into a pocketbook type and making them attachable to and detachable from a pocketbook constituting body electrically and mechanically.

CONSTITUTION: A cover A1 and a back cover A2 of a pocketbook are formed by folding a sheet-shaped soft part, and a paper-shaped liquid crystal display device D and a touch-type thin keyboard K are arranged on the inside of the cover A1. A CPU is incorporated in a part of the inside of the cover A1 or the inside of the display device D or the keyboard K, and a paper-shaped battery BAT is incorporated in the back cover A2. Card-type computer constituting elements C1-C3 consist of, for example, an ROM, an RAM, etc., and their terminals X are brought elastically into contact with a bus line FX of a flexible print substrate F pressed in between a pair of pawls of holder parts H1 and H2. Thus, cards and the CPU are connected electrically and are attached and detached mechanically.
